### Atomic Structure Periodic Table Answer

This lab explores the structure of atoms and elements as well as simple ionic bonds. Students use colored beads and the periodic table to model and identify different elements. Students also assemble a periodic table of secret agents, and try to identify the missing agent, based on trends and patterns.

The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and nonmetals on the right.

Created by Dmitri Mendeleev (1834-1907), the periodic table orders all known elements in accordance to their similarities. When Mendeleev began grouping elements, he noticed the Law of Chemical Periodicity. This law states, "the properties of the elements are periodic functions of atomic number." The periodic table is a chart that categorizes ...

The answer is that we know about the properties of the atoms that make them up. In order to get to that point, we must first understand the composition of atoms and how to determine that based upon the information provided to us on the periodic table. MODEL 1: SUBATOMIC PARTICLES Absolute Mass  $9.109 \times 10^{-31} \text{ kg}$   $1.673 \times 10^{-27} \text{ kg}$  Relative Mass

A period in the periodic table is a row of chemical elements. All elements in a row have the same number of electron shells. Each next element in a period has one more proton and is less metallic than its predecessor. Arranged this way, groups of elements in the same column have similar chemical and physical properties, reflecting the periodic law. For example, the halogens lie in the second-last ...
