For instance, if the formula for the terms a_n of a sequence is defined as " $a_n = 2n + 3$ ", then you can find the value of any term by plugging the value of n into the formula. For instance, $a_8 = 2(8) + 3 = 16 + 3 = 19$. In words, " $a_n = 2n + 3$ " can be read as "the n -th term is given by two- n plus three".
