In this speed control method of 3 phase induction motor when the stator voltage is reduced, the air gap flux and the motor torque both will reduce. The speed control is obtained at the cost of reduction of motor torque. In this method, very low starting torque is produced. Therefore, this type of control is not suitable for constant torque loads.

The inverter unit controls the speed of a three-phase induction motor by changing the frequency,  $f$ , of the voltage applied to the motor. The inverter unit changes the frequency,  $f$ , by changing the ON/OFF cycle of the six switching elements, and the rotational speed ( $N$ ) of the motor changes in proportion to

loop control of the 3 phase induction motor at variable speed using a 3 phase inverter. The 3 phase inverter is supplied from a 400V DC supply. The 3 phase inverter with 3 legs use IGBTs as switches for the generation of 3 phase output. The switches are controlled by pulses created by the PIC microcontroller.
