For accurate retinoscopy the child should look at the examiner's light for a time period that varies from few seconds to few minutes. Most children, including infants, can look at the light long enough to allow successful retinoscopy in the office without anesthesia. However, in some cases general anesthesia may be needed if the child does ...

Retinoscopy - American Association for Pediatric ...

Static retinoscopy is performed when the patient has relaxed accommodative status. This can be obtained by the patient viewing a distance target or by the use of cycloplegic drugs (where, for example, a child's lack of reliable fixation of the target can lead to fluctuations in accommodation and thus the results obtained).
